

MVLU COLLEGE

AI PRACTICAL NO. 9

AIM: Association Rule Mining

- Implement the Association Rule Mining algorithm (e.g., Apriori) to find frequent itemsets.
- Generate association rules from the frequent itemsets and calculate their support and confidence.
- Interpret and analyze the discovered association rules.

#CODE:

PRACTICAL 6: ASSOCIATION RULE MINING USING APRIORI

```
import pandas as pd
import matplotlib.pyplot as plt
from mlxtend.frequent_patterns import apriori, association_rules
```

1. LOAD DATASET

```
df = pd.read_csv("C:/Users/DELL/Desktop/siya/DATASET/new_test.csv")
```

```
print("==== DATASET ====")
print(df.head())
```

```
print("\nDataset Shape:", df.shape)
print("\nColumns:", df.columns.tolist())
```

2. PREPARE TRANSACTION DATA

```
data = df.copy()
```

```
# Convert age into categories
data["age_group"] = pd.cut(
    data["age"],
    bins=[0, 30, 40, 50, 60, 100],
    labels=[
        "Age <= 30",
        "Age 31-40",
        "Age 41-50",
        "Age 51-60",
        "Age > 60"
    ]
)
```

```
# Convert duration into categories
data["duration_group"] = pd.cut(
```

MVLU COLLEGE

AI PRACTICAL NO. 9

```
data["duration"],
bins=4,
labels=[
    "Duration Low",
    "Duration Medium",
    "Duration High",
    "Duration Very High"
]
)

# Remove original numerical columns
data = data.drop(columns=["age", "duration"])

# Convert data into transaction format
basket = pd.get_dummies(data.astype(str)).astype(bool)

print("\n===== TRANSACTION DATA =====")
print(basket.head())

# 3. FIND FREQUENT ITEMSETS USING APRIORI

frequent_itemsets = apriori(
    basket,
    min_support=0.05,
    use_colnames=True
)

frequent_itemsets = frequent_itemsets.sort_values(
    "support",
    ascending=False
)

print("\n===== FREQUENT ITEMSETS =====")

print(
    frequent_itemsets[
        ["support", "itemsets"]
    ].head(20)
)

print("\nTotal Frequent Itemsets:",
      len(frequent_itemsets))
```

MVLU COLLEGE

AI PRACTICAL NO. 9

4. GENERATE ASSOCIATION RULES

```
rules = association_rules(
    frequent_itemsets,
    metric="confidence",
    min_threshold=0.50
)

rules = rules.sort_values(
    "confidence",
    ascending=False
)

print("\n===== ASSOCIATION RULES =====")

print(
    rules[
        [
            "antecedents",
            "consequents",
            "support",
            "confidence",
            "lift"
        ]
    ].head(20)
)
```

5. DISPLAY TOP RULES

```
print("\n===== TOP ASSOCIATION RULES =====")

for _, row in rules.head(10).iterrows():

    antecedent = ", ".join(row["antecedents"])
    consequent = ", ".join(row["consequents"])

    print("\n", antecedent, "---->", consequent)

    print("Support:",
          round(row["support"], 3))

    print("Confidence:",
```

MVLU COLLEGE
AI PRACTICAL NO. 9

```
round(row["confidence"], 3))
```

```
print("Lift:",  
      round(row["lift"], 3))
```

6. INTERPRET STRONGEST RULE

```
if len(rules) > 0:
```

```
    best = rules.iloc[0]
```

```
    print("\n===== INTERPRETATION =====")
```

```
    print(  
        "Strongest Rule:",  
        ", ".join(best["antecedents"]),  
        "---->",  
        ", ".join(best["consequents"])  
    )
```

```
    print("Support:",  
          round(best["support"], 3))
```

```
    print("Confidence:",  
          round(best["confidence"], 3))
```

```
    print("Lift:",  
          round(best["lift"], 3))
```

```
    if best["lift"] > 1:  
        print("Analysis: Positive association between the items.")
```

```
    elif best["lift"] == 1:  
        print("Analysis: The items are independent.")
```

```
    else:  
        print("Analysis: Negative association between the items.")
```

```
else:  
    print("\nNo association rules found.")
```

7. GRAPH

MVLU COLLEGE

AI PRACTICAL NO. 9

```
if len(rules) > 0:

    plt.scatter(
        rules["support"],
        rules["confidence"]
    )

    plt.xlabel("Support")
    plt.ylabel("Confidence")
    plt.title("Association Rules: Support vs Confidence")
    plt.grid()

plt.show()

# FINAL RESULT

print("\n===== FINAL RESULT =====")

print(
    "Frequent Itemsets Found:",
    len(frequent_itemsets)
)

print(
    "Association Rules Found:",
    len(rules)
)

print("\nPractical Completed Successfully!")
```
